INTERVIEW-PREP PACKET 1 OF 5 · ADD-ON · FOUR DESIGN CASES FROM THE GOOGLE FIBER (GFIBER) PACKET

Amazon NACF Supply Chain loop — Packet 1 add-on: Snigdha Tripathy

Amazon — Senior Supply Chain Manager, NACF Supply Chain (L6) · four full design stories: E1 · E3 · E9 · E11

Snigdha Tripathy

Senior Manager, Supply Chain — NACF Supply Chain · HIRING MANAGER

Wednesday, October 29, 2026 · 10:00 am PDT · 55-minute video interview

COMPANION TO: AMAZON-NACF-PANEL-1-TRIPATHY-KIMI-K3 (THE SEVEN FLEXPORT PRIMARIES). NOTHING IN THAT PACKET CHANGES; THIS ADD-ON STANDS ALONE.

DESIGN CASE — say "I designed"; numbers marked illustrative / modeled / record per basis label. This banner repeats on every story. None of the four is a delivered result.

Why this add-on exists. Her public profile (public-profile inference, labeled as such in the main packet) says she will test whether mechanisms transfer to her world: inventory placement across a network, inbound lead times and capacity, readiness for 50+ launches, standard work and root cause. The four design cases map one-to-one onto that: **E1** field / truck-stock inventory — positioning and replenishment (maps to FC placement); **E3** vendor EDI + VMI for long-lead equipment — inbound planning and lead times (maps to inbound capacity); **E9** ERP cutover from a legacy WMS — tolerance, mocks, freeze, one promise publisher (maps to FC launch readiness); **E11** direct procurement of long-lead equipment — PO lifecycle, confirmations, ranked expediting (maps to inbound expedite and prioritization). Each is a full primary, built at finished-goods grain, with the same anatomy as the Flexport primaries: pitch, situation / task, five gated phases, basis-labeled results, L6 evidence, five labeled facets, four-table math, a four-question behavioral pack, three angle cards and three trap drills.

How to say it: every story below is a **design case**. Open with "I designed…" or "Here is how I would run it…". Where a lived record sits underneath (Sephora cutover, Elementum EDI lanes and lead-time distributions, Flexport gates) it is named separately and labeled **record**; the design numbers are **illustrative** or **modeled**, never delivered outcomes.

Canon: amazon/amazon-l6-scm-master-packet.html (E1 / E3 / E9 / E11, §3.0); origin: GFiber_MASTER_Packet_v8 Part 3 prompts D1 / D3 / D9 / D11; record numbers: Apple PMIII v11 and NUMBERS-RECON §3 (CANON v2). Every dollar carries its basis label.
